CRITICAL EQUIPMENT FIRE SUPPRESSION SYSTEMS

ELECTRICAL PANEL

“A fire outbreak can catch you offguard when least expected. Your Electrical Panels are highly vulnerable to a fire outbreak.”

CAUSES OF FIRE

- Wire fatigue
- Improper installation
- Overloaded circuits
- Equipment failures
- Poor maintenance

CAUSING

- Business downtime
- Production loss
- Revenue loss
- Infrastructure loss
- Loss of human life

IF, A FIRE IS IGNITED, THEN :

- It is literally impossible to suppress with portable extinguisher, since the panel doors are always closed
- Panel rooms are mostly unsupervised due to which there is a considerable time lag from the start of the fire until people around are alerted

REDUCE YOUR INSURANCE PREMIUM ON CAPITAL GOODS

WEFIRE™ Solution

- A Linear pneumatic WEFIRE™ Heat Detection Tube is routed inside the panel which senses the heat of the fire at its insipient stage
- The WEFIRE™ Heat Detection tube upon detection, ruptures at the hottest point forming a nozzle like opening. This activates the cylinder valves and the clean agent gas discharges through the opening directly onto the fire
- The gas is Non-conducting, non-toxic and leaves no residue; hence does not spoil expensive electronics inside

WEFIRE™ tube discharge system

WEFIRE™ Heat Detection Tube is routed in a zig-zag pattern inside the electrical panel throughout all the compartments. This tube is connected with the Tube Discharge System cylinder containing the extinguishing gas. A hooter is also provided to alert people post system activation.

WEFIRE™ recommends the use of following clean agent extinguishing gas for Electrical Panels

- 3M's Novec 1230 or FK-5-1-1-2 based extinguishing agent
- FM200 or HFC

ADVANTAGES

Simple & uncluttered design

Quick detection

24/7 Unsupervised fire protection

No electricity required

- No clean up in the equipment required post gas discharge
- Turnaround time to re-instate the system is few hours so minimal damage and downtime
- Virtually ZERO maintenance
- Can be integrated with BMS, Fire alarm system, SCADA

ABOUT US

WEFIRE™, a brand owned by Warrier Electronics® has an experience of installing several hundreds of WEFIRE™ critical component fire suppression systems across India and parts of Malaysia.

Established in the year 2010 in Pune (India), a period when start-ups were looked at ambiguously, Warrier Electronics® did not just survive, but thrived and achieved various growth milestones from being a sub-dealer to dealer to distributor to manufacturer within a decade; and has become the default choice of various OEM's for WEFIRE™ critical component fire suppression systems, serving across India.

At the heart of the company, lies its core values viz Excellence, Innovation, Integrity and Respect. These values not only translate into a niche & reliable end product, but also in the way its team reciprocates to client needs at every step. A company is only as good as its people & product and its product reflects the quality, intelligence and excellence of its people!
